

X_TRADER® PLUG-INS

Customize X_TRADER® for Your Trading Style

Products for Standard X_TRADER®

Product	Description
ATLAS™ *	Stores traders' Audit Trail messages into a centralized database.
OCO Trader™ Ltd	Places two orders into the market automatically whenever it receives a fill for a contract it is tracking.
PS Trader	MD Trader®-style depth window with added features. Allows entry-style One-Cancels-Other (OCO) orders with trailing stops. Displays and allows quick adjustment of working orders from an order pane.
PSSender™	Enables users to send files via e-mail or File Transfer Protocol (FTP), which can allow other plug-in applications to automatically send files after they are created.
Trade Tracker**	Automatically records all order and fill information across exchanges and traders and feeds data into a SQL Server database for easy access.

Products for X_TRADER® Pro

Product	Description
Alert Manager	Sends alerts, sends e-mail notifications and/or deletes orders based on specified time and market conditions for selected products.
DART™	Provides customizable queries to retrieve data from TT's database application, Trade Tracker.
EFRT™ v2	Tracks and displays the "Transactions: Fills" ratio for firms, groups and individuals. Allows the user to break down the ratios by gateway, exchange, trader and product.
Equalizer™	View and enter orders for multiple contracts in one window. Displays market depth horizontally, maximizing the amount of information that can be displayed and minimizing time needed to place an order.
Fill Recapper	Displays all fills for a trader and allows users to aggregate fill statistics, including net position and average price, in multiple formats. Useful for trading spreads because a spread fill can be viewed as a single fill with the ability to also view the fill for each leg.
Morph™	Breaks up orders, which can be placed using any TT trading application, before they are individually risk checked and submitted to the exchange. Orders can be broken up and placed on multiple flavors of a gateway or into multiple accounts.
Navigator™	Allows a trader to display two contracts' bids and offers side-by-side. Orders can be submitted on either of the two contracts or to the best market based on rules created by the trader during setup. Supports limit, stop limit, stop market and OCO orders on one contract or between the two contracts.
OCO Trader™	Places an OCO order into the market automatically after a fill is received for the contract. The OCO is comprised of a limit order with a specified tick offset and a market or limit stop order, which can trail. Can also cancel orders for the contract to maximize position for FIFO.
Price Injector	Injects information from a live link in Excel® into a product in TTSIM. Useful for injecting the underlying values of non-TT supported products or theoretical prices into X_TRADER. Messages also can be inserted into the TTSIM logfile.
Risk Inserter	Enables creation of new traders within Guardian from pre-defined templates.
Spread Driver	Manipulates Autospreader® orders automatically via user-defined parameters. Orders can be added, deleted, moved and changed. The bid/ask quantity and price values can be linked from Excel to automatically update values.
TOES™	Offers the ability to execute timed, iceberg, care and single orders. Creating and managing many orders is easy though the intuitive user interface and flexible order parameters.
Trade Analyzer™	Allows risk administrators or traders the ability to analyze the current day's trades from a comprehensive statistics report.
TT™ Keys	Permits traders to enter and manipulate orders on any product that can be traded through X_TRADER Pro via the X-keys® keypad from P.I. Engineering, Inc.

* Free with Trade Tracker ** Additional fee required
